Pragati Mynampati

Software engineer with 5+ years building data platforms and distributed backend systems. Strong in Python, Java, Kafka and AWS, with healthcare and scientific data experience. Dallas, TX. pragati.mynampati@gmail.com

Experience

Data Engineer II, Cotiviti

November 2024 to now

- Built and operated distributed streaming systems using Spark Structured Streaming, Kafka and Python, processing 5M+ events a day with strict uptime and latency requirements.
- Developed cloud-native backend services and APIs integrating FHIR and HL7 data sources, enabling structured ingestion and storage of clinical and operational data.
- Architected data lake solutions on AWS (S3, EC2) with optimized Parquet storage and Snowflake integration for analytics.
- Optimized query performance, partitioning and caching, improving analytics performance by 30% and reducing latency by 25%.
- Containerized services using Docker and deployed on Kubernetes, reducing deployment time by 40%.
- Implemented observability practices (logging, metrics, monitoring) to improve reliability and reduce incidents.

Data Integration Engineer, Highmark Health

September 2022 to September 2024

- Developed and maintained distributed ETL and ELT pipelines using Kafka, Spark and Spring Boot, processing 1M+ messages in production.
- Built event-driven architectures using Kafka and Confluent Cloud, enabling scalable ingestion and transformation of healthcare data.
- Developed production-grade backend services in Java Spring Boot with robust error handling, retry logic and fault tolerance.
- Automated deployments using CI/CD pipelines, reducing release cycles by 40%.
- Improved system efficiency through data modeling, query optimization and connection pooling.
- Collaborated with engineers, analysts and product teams to deliver scalable data solutions.

Associate Software Engineer, Accenture Solutions Pvt Ltd

December 2020 to July 2021

- Developed data pipelines and backend systems using Ab Initio, improving batch processing performance by 40%.
- Designed data workflows and transformations supporting enterprise data warehouse systems.

Education

M.S. Computer Science, University of Maryland, Baltimore County

December 2022

B.E. Computer Science, Visvesvaraya Technological University

August 2020

Technical skills

Programming	Python, Java, C and C++
Backend	REST APIs, microservices, system design
Data engineering	Kafka, Spark, ETL and ELT, data modeling
Data platforms	Data lakes (S3), Snowflake, Parquet
Cloud	AWS (EC2, S3, IAM), GCP (Pub/Sub)
Containers	Docker, Kubernetes
CI/CD	Git, CI/CD pipelines
Databases	SQL, Oracle, MySQL
Concepts	Event-driven architecture, distributed systems, observability, performance optimization
